

## Team MiniCappin

### Marking Scheme

1. Agile planning: 2
2. Software Architecture: 2
3. UI Prototypes: 3
4. Testing Report: 3
5. Usability testing: 5
6. Issue tracking: 2
7. Refactoring: 2
8. PR reviewing: 4
9. Code Quality report: 3
10. Presentation/Demo to the Product Owner/Teacher: 4

### **Comments**

#### 1. Agile planning [1.5/2]

There are 3 user stories pushed to the next Sprint, and 5 users stories completed in Sprints 3 and 4. Burndown charts are not available. There was a tool that will be used for generating burndown charts for GitHub projects

<https://github.com/vibgetowi/github-projects-burndown-chart>

The retrospectives are done professionally.

#### 2. Software Architecture [1/2]

The MVVM architecture is explained.

<https://github.com/Minicapping-Soen390/Minicap/wiki/MVVM-guide>

This wiki was available in Release 1. There were 2 updates done in Release 2.

The intention of this section was to discuss your own implementation of design patterns.

Diagrams were updated.

Design patterns are discussed in the presentation but missing from the documentation.

The discussed patterns are very reasonable.

#### 3. UI Prototypes [3/3]

Is there any update done for this release? Please minimally add in your report what are the new mockups you made or those updated.

V3 includes updated mockups (high contrast UI)

#### 4. Testing Report [3/3]

Over 90% test code coverage + recorded end-to-end tests.

#### 5. Usability testing [4.5/5]

UXCam is used for usability testing. There is some research done about alternative tools.

There were two scenarios tested.

It is not clear how many users participated. 3 users participated.

**The number of users is small.**

#### 6. Issue tracking [2/2]

There were 3 bugs reported (1 was for SonarCloud) 2 were app bugs, which were well documented.

#### 7. Refactoring [1/2]

There was some refactoring done to reuse styles (inline css to global stylesheet)  
<https://github.com/Minicapping-Soen390/Minicap/pull/163/files#diff-f481e82ce73fb605dc744c30c14923ab9290421eb27df51895f91e9fd0ef931f>  
I would like you to do more code-related refactorings from Fowler's catalogue.

#### 8.PR reviewing [3/4]

I only found the following PR discussing something related to refactoring  
<https://github.com/Minicapping-Soen390/Minicap/pull/165>  
The rest of the PRs mostly discuss implementation issues.

#### 9.Code Quality report [3/3]

Small number of issues. 35 maintainability issues.  
There is some small duplication between tests (0.4%).

#### 10.Presentation/Demo to the Product Owner/Teacher [4/4]

|                                                                           | 1 | 2 | 3 | 4 | 5 | N/A |
|---------------------------------------------------------------------------|---|---|---|---|---|-----|
| Time taken for the presentation (punctuality)                             |   |   |   |   | X |     |
| Content coverage as requested (Did the team cover all expected topics?)   |   |   |   |   | X |     |
| Preparation for delivering the presentation (how well practiced)          |   |   |   |   | X |     |
| Coordination among presenters                                             |   |   | X |   |   |     |
| Presentation skills                                                       |   |   |   | X |   |     |
| Answering of questions (Professionalism, clarity, sufficient explanation) |   |   |   |   | X |     |

#### Teacher comments:

Teams are divided into feature teams.  
The team has established standards.  
Team switched to GitHub Projects. Personalized views.  
Good choice to drop MongoDB.

Design patterns are discussed in the presentation but missing from the documentation.  
The patterns are very reasonable.

There were some miscommunications in the coordination.  
One presenter had a mic issue, and Minh talked about the UI component.

The maintainer of the SonarCloud is missing.  
Finished in 18 minutes.

**Total: 26/30**
